
PERFORMANCE AND RESULTS MANAGEMENT SYSTEM (PRMS)

Reporting Tool User Guide

A practical, step-by-step guide to the six key areas of the Reporting Tool, covering the user journey from signing in to submitting an Innovation Package.

Version 1, 16 September 2026 · U.S. English

Before you start

The Reporting module in PRMS enables CGIAR Programs and Accelerators to submit annual results, track progress against planned deliverables and maintain an up-to-date overview of their performance throughout the reporting cycle.

Every section pairs its narrative with a real screenshot from the Reporting Tool. Wherever you see an orange ring or arrow, it marks the single button, link, or item that section is talking about – that marker is added only for this guide and never appears in the real application.

To begin, sign in to PRMS with your CGIAR account at <https://reporting.cgiar.org>. For testing and training, users are invited to use the testing environment at <https://reporting-test.cgiar.org>. Once you are signed in, the sections that follow move in the same order you will naturally work through them: landing, overview, reporting, results, notifications, and innovation packages.

Throughout this guide, an **orange ring or arrow** like this one marks the one action each screenshot is calling out – it is never part of the app's own interface.

Landing Page

After you sign in, the landing page is the first thing you see. Its **Welcome** banner names the reporting phase that is currently open, so you always know which cycle your work belongs to.

Below the banner, the page lists two entry points into reporting: **My CGIAR Centers**, one card per Center you belong to, and **My Science Programs/Accelerators**, one card per Program you have access to — each Program card shows how many results exist for it this phase and a progress bar for how much is still being edited versus already submitted. Alongside them, the **Reporting overview** panel totals those numbers across all of your Programs and breaks them down by status, so you can see at a glance how close your whole portfolio is to done.

This page matters because it is your starting point every time you sign in — it tells you where reporting stands before you open any one Center's or Program's details.

To move from this landing page into a specific reporting flow, click **Report** on the first card under **My CGIAR Centers** — opening a Program card works the same way. Either path leads into that entity's own reporting details, covered next.

Overview Dashboard

Once you open a Program, its Overview page is where you land. It summarizes that Program's reporting cycle in one screen: total results split between **W1/W2** (Windows 1 and 2, pooled/core funding) and **W3/Bilateral** (Window 3, bilateral funding), how many CGIAR Centers are contributing, and progress against the Program's planned Key Performance Indicators (KPIs), grouped by Area of Work (AoW).

This page matters because it is where you judge how far a Program has come before drilling into any single area — the **Progress by area of work** panel shows exactly which AoWs still have KPIs left to report and which are further along, so you know where to focus next.

The tabs above this panel (**Overview**, **Reporting**, **Results**, and more) are how you move between reviewing a Program's current state and going to report on it — that next step is the **Reporting** tab, covered next.

To move from reviewing progress to entering results, click **Continue reporting**.

Click Continue reporting to move from the Overview into the Reporting tab.

/result-framework-reporting/entity-details/SP01/overview

Reporting Page

The Reporting tab breaks down exactly what your Program needs to report this cycle, organized by Area of Work (AoW). Chips above the list scope it to one kind of result — Knowledge Product, Innovation Development, Policy Change, Innovation Use, or Capacity Sharing — and you can also filter to **Only pending** items or mark ones you check often as **Favorites**. Use **Expand all** in the toolbar to open every AoW at once (press it again to collapse), or an individual AoW card's own **Expand all** to open just that one. If you have drilled into a single AoW, **All Areas of Work** takes you back to the full list.

This page matters because it turns a Program's entire reporting workload into one navigable list instead of a single long form — you can jump straight to Market Intelligence, Accelerated Breeding, or any other AoW your Program tracks, see how many Key Performance Indicators (KPIs) still need attention, and open just that group.

Each AoW expands into High Level Outputs (for example, "Steer to impact") that group its indicators — opening one shows you the specific work behind that AoW's numbers.

Not sure where a given result belongs? Click **Where to report** in the page header — it opens a guide to the right place to report. To open one Area of Work directly instead, use **By AOW** on its row.

The screenshot shows the 'Breeding for Tomorrow' reporting interface. Key features highlighted with callouts include:

- Search AoWs and KPIs**: A search bar at the top left of the main content area.
- Where to report**: A button in the top right corner.
- Expand every AoW**: A button next to the search bar.
- Filter by result type**: A button above the list of Areas of Work.
- Open one Area of Work**: A button next to the 'Filter by result type' button.
- By AOW**: A button next to the 'Open one Area of Work' button.

The main content area displays a list of Areas of Work (AoWs) with their respective KPIs and progress bars:

AoW	Name	KPIs	Progress	QA	PREL	Int. outcomes
AOW01	Market Intelligence	23 KPIs	0 of 23	0%	0%	0%
AOW02	Accelerated Breeding	138 KPIs	0 of 138	0%	0%	0%
AOW03	Inclusive Delivery	101 KPIs	0 of 101	0%	0%	0%
AOW04	Breeding Resources	66 KPIs	0 of 66	0%	0%	0%
AOW05	Enable	75 KPIs	0 of 75	0%	0%	0%
INTERMEDIATE	Intermediate outcomes	7 KPIs	0 of 7	0%	0%	0%
2030	2030 outcomes	5 KPIs	0 of 5	0%	0%	0%

Click Where to report for guidance on which Area of Work a result belongs to.

</result-framework-reporting/entity-details/SP01?tocView=aows>

Results Center

The Results Center is a single searchable table of every result across all Programs and Centers — results here cover the full range of Program work, including knowledge products, innovation development, policy changes, and more. Use **Filter** and the phase tags (for example **Phase: Reporting 2026 (Open)**) to narrow the table to one Program, Center, phase, or status, and the search box to find a result by title, code, or indicator.

This page matters because it is the one place a P/A goes to update a result after it was first created elsewhere — including this year's innovations. If your Program already has innovations logged for the current reporting year and their status, contributors, or details need changing, this is where you make that change: filter the table to the current phase and, if useful, the **Innovation development** category to find the result, then click **Update result** in the page header and pick the result you want to change.

You can also export the current table view with **Export CSV** for offline review.

The screenshot shows the 'Results Center' interface. At the top, there's a search bar and navigation links like 'Support', 'Tour', 'Where to report', and 'Update result'. Below the search bar, there's a filter button and active filters for 'Phase: Reporting 2025 (Closed)' and 'Phase: Reporting 2026 (Open)'. A 'Clear filters' button is also present. On the right, there are buttons for 'Export the table' and 'Export CSV'. The main area displays a table of results with columns: CODE, TITLE, PROGRAM, CENTER, PHASE, INDICATOR CATEGORY, FUNDING, STATUS, and CREATED. The table shows 10 results, with the first 9 having a status of 'Editing' and the last one 'Submitted'. Callouts with arrows point to the search bar ('Find a result'), the filter button ('Filter by phase or status'), the 'Update result' button at the top right, and the 'Export CSV' button.

`/result/results-outlet/results-list`

Notifications

Notifications is where other Programs, Accelerators, or Window 3/Bilateral projects reach out to you about shared results. The **Requests** tab lists collaboration requests — for example, another Program asking to be added as a contributor to one of your results — while the **Updates** tab covers other changes worth knowing about. Use **Requests received** to see what has come in for you, or **Requests sent** to check on requests you sent to others, and the phase filter (for example **Reporting 2026 - (Open)**) to scope the list to the current cycle.

This page matters because these requests affect your Program's Theory of change (ToC): accepting one links that result to your own ToC indicators and targets, so leaving a request pending can leave a real contribution unrecorded.

Each pending request is its own card describing who is asking and why. Open the first card in the **Pending** list and choose **Accept contribution** to confirm it, or **Decline contribution** if it doesn't apply to your Program.

Results Center

Notifications

Requests Updates **Requests or Updates**

This tab displays collaboration requests received from other Programs/Accelerators or W3/Bilateral projects. You can accept or decline each invitation – if you accept, you will be able to link the collaborative result to your own ToC indicators and targets, provided the result was also planned in your ToC. Note that requests can be accepted or declined even after the result has been submitted.

Phases: Reporting 2026 - (Open) Entity: Select Entity Search: * Clear filters

W3/Bilaterals

Center CIR has reported a w3/bilateral result under project 28586 - Functional tissue culture laboratory established in Japaiguri and the result has been approved by Science Program SP01. You have been tagged as contributor to this result. Do you confirm program's SP09 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center IIRI has reported a w3/bilateral result under project 28543 - Development of project protocols and standard operating procedures for systemic methane emissions measurement and data management and the result has been approved by Science Program SP06. You have been tagged as contributor to this result. Do you confirm program's SP09 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center IIRI has reported a w3/bilateral result under project 28540 - Irrigation management regimes identified that can reduce GHG emissions and water use with minimal yield reduction in adapted varieties and the result has been approved by Science Program SP02. You have been tagged as contributor to this result. Do you confirm program's SP09 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center IIRI has reported a w3/bilateral result under project 28540 - Irrigation management regimes identified that can reduce GHG emissions and water use with minimal yield reduction in adapted varieties and the result has been approved by Science Program SP02. You have been tagged as contributor to this result. Do you confirm program's SP01 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center IIRI has reported a w3/bilateral result under project 28523 - Mechanized DSR supported through large-scale cluster demonstrations at farmers' fields, and the result has been approved by Science Program SP02. You have been tagged as contributor to this result. Do you confirm program's SP07 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center IIRI has reported a w3/bilateral result under project 28523 - Mechanized DSR supported through large-scale cluster demonstrations at farmers' fields, and the result has been approved by Science Program SP02. You have been tagged as contributor to this result. Do you confirm program's SP07 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center Bioversity (Alliance) has reported a w3/bilateral result under project 28519 - Integrated sustainable cattle ranching practices for water-efficient and low-emission grazing systems in Colombia and the result has been approved by Science Program SP01. You have been tagged as contributor to this result. Do you confirm program's SP06 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center Bioversity (Alliance) has reported a w3/bilateral result under project 28514 - Multi-stress phenotyping platform and protocols to screen rice germplasm for climate resilience in Colombia (Palmita and Saldaga), and the result has been approved by Science Program SP01. You have been tagged as contributor to this result. Do you confirm program's SP09 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

W3/Bilaterals

Center Bioversity (Alliance) has reported a w3/bilateral result under project 28508 - Digital Monitoring and Learning Dashboard for Impact Assessment, and the result has been approved by Science Program SP09. You have been tagged as contributor to this result. Do you confirm program's SP06 contribution to the result?

Accept contribution Decline contribution Requested 1 day ago

Open the first pending request and choose Accept contribution or Decline contribution.

/result/results-outlet/results-notifications/requests/received

Innovation Packages

The Innovation Packages module lists every Innovation Packages and Scaling Readiness (IPSR) assessment your Program can access, one row per package, with its submitter, status, phase year, and phase portfolio. Use the **Find result**, **Submitter**, **Phase**, or **Package status** filters to narrow the table. To start a new assessment from scratch, click **Create a new Innovation Package**.

This page matters because it is where a Program tracks its innovations through the IPSR pathway — from an early assessment to a package ready for scaling — separately from the individual results listed in the Results Center. Each row's PDF icon gives you a shareable copy, and **Download** exports the current table.

To review or continue work on a specific package, click its title in the table — for example, the first package listed. That opens the full assessment, including where to add scaling-readiness details or move it toward submission.

/ipsr/list/innovation-list

Accelerator

Accelerators will undertake strategic research in their topical areas and, through working with all other Programs, bolster CGIAR's ability to reach and support targeted end-users while furthering collaboration, coherence, and integration across the entire Portfolio.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Area of Work (AoW)

The term "Area of Work" is used to refer to the research components of a Program/Accelerator. An Area of Work should be designed as a connected set of activities and outputs which contribute to one or more high-level outputs. An Area of Work may include research activities and/or support activities.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Bilateral / Window 3 (W3)

Funding tied to a specific donor or project rather than pooled across the whole portfolio. Window 3 and bilateral results are reported into the Program or Accelerator they are aligned to, alongside that Program's core-funded results.

Source: PRMS (not on CLARISA) – accessed on 2026-09-15

Capacity sharing for development

Activities that develop the know-how and capacity to design, test, validate and use innovations. Examples: training-of-trainers programs at the farmer level; providing guidance on RBM and MEL; training programs with public and private sector partners; educating PhD and MSc students; ongoing institutional support to national partners, particularly NARES; and strengthening government policy analysis.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

CGIAR Center

Non-profit research organizations conducting innovative research. Home to more than 9,000 scientists, researchers, technicians and staff, the Centers work to transform food, land and water systems in a climate crisis.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Collaboration / contribution request

A request from another Program, Accelerator, or Window 3/Bilateral project asking to link one of your results to theirs as a contributor, or asking you to confirm your own contribution to one of their results. You accept or decline it from Notifications.

Source: PRMS (not on CLARISA) – accessed on 2026-09-15

High Level Output (HLO)

HLOs are a means for P/As to plan the topics of work within Areas of Work (AoWs). HLOs are “containers” or “clusters” of work to be delivered on a specific topic or theme. There are multiple HLOs within one AoW. One HLO may contain multiple activities which are thematically aligned but not directly connected (i.e. activities which are led by different groups operating in different locations). HLOs may have indicators defined which are somewhat aggregated and used to track multi-year P/A delivery. For example, an HLO indicator might be “ten innovations to be developed relating to climate information services”. A combination of PODs and window 3 / bilateral projects may contribute to the delivery of these HLO indicators over the years the P/A is active.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Indicator

Is a standardized measurement that provides evidence or information on progress or change toward achieving specific targets or goals used to trace and compare results, monitor trends, identify areas for action across impact pathways over time and across contexts.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Innovation development

The process of developing innovations from an idea to a proven product, technology, service or arrangement that is validated for its ability to contribute to positive impacts when used at scale. The process often includes basic research, innovation design, and improving innovations based on testing under (semi-)controlled and uncontrolled conditions. Progress in innovation development is measured in an evidence-based way along the 0-9 levels of innovation readiness. (Scaling Readiness/ IPSR-term: www.scalingreadiness.org).

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Innovation package

Combinations of interrelated (bundles of) innovations and enabling conditions that, together, can lead to transformation and impact at scale. Innovation packages are context-, outcome-, and use-group-specific and their ability to contribute to outcomes and impact can change over time. Not to be confused with a Package of deliverables (POD), which is a planning and reporting concept for grouping deliverables. (Scaling Readiness/ IPSR-term: www.scalingreadiness.org; see also: Innovation Bundle).

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Innovation Packages and Scaling Readiness (IPSR)

CGIAR's approach for mainstreaming scaling across the research-to-impact pathway. IPSR embeds scaling as a continuous, stage-gated process – from early characterization of innovations through to sustained use at scale— covering four integrated areas: innovation profiling, innovation packaging, scaling strategies, and innovation portfolio management. Combining innovation readiness with innovation use, it provides the evidence base for decisions on what innovations to advance, adapt, or pause. (Scaling Readiness/ IPSR-term: www.scalingreadiness.org)

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Innovation use

A metric used to assess the extent to which an innovation is already being used, by which type of users and under which conditions, with a scale ranging from no use (lowest level - 0) to common use (highest level - 9). An innovation that is only used by the project, design or intervention team or its direct partners will score low in innovation use. Innovations that are commonly used by anticipated end-users will score high in innovation use. Users that are directly incentivized by a project or intervention to use an innovation are considered project team or direct partners which will score as low innovation use. (Scaling Readiness/ IPSR-term: www.scalingreadiness.org).

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Key Performance Indicator (KPI)

A specific, measurable target used to track a Program's progress within an Area of Work – for example, a count of results planned for a given topic. The Reporting page shows how many KPIs have been reported against the number planned for each AoW.

Source: PRMS (not on CLARISA) – accessed on 2026-09-15

Knowledge product

Knowledge products are intellectual assets generated from research and development activities such as articles, briefs, reports, extension and training content, databases, software, and multimedia elements that contribute to behavioral changes in particular actors.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Phase

A reporting cycle with its own open and close dates – for example, "Reporting 2026 (Open)". Results, requests, and other reporting activity are scoped to whichever phase you have selected.

Source: PRMS (not on CLARISA) – accessed on 2026-09-15

Policy change

Policies, strategies, legal instruments, programs, budgets, or investments at different scales (local to global) that have been modified in design or implementation, with evidence that the change was informed by CGIAR research.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Portfolio

The CGIAR System Framework approved by the System's Funders and Centers in June 2016, and then amended in October 2024, defines "CGIAR Portfolio" as the research programs and/or platforms carried out by the Centers and the CGIAR System Partners in support of the CGIAR Strategy and Results Framework and which are supported by (i) the CGIAR Trust Fund and/or (ii) bilateral sources contractually aligned to such programs and/or platforms.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Program

CGIAR Programs are the main vehicle for delivery of research and innovation by CGIAR from 2025 to 2030. Programs serve as entry points to describe CGIAR's offer on a key topic, elevating CGIAR's visibility in global agendas and facilitating the continuation and formation of inclusive alliances and partnerships. They state quantitatively what impacts and outcomes they intend to achieve, along a theory of change. They come with evaluable results frameworks and clear reporting of results against investment. Bilateral and window 3 projects are aligned to Programs and Accelerators and their results are reported as part of Program and Accelerator reporting.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Result

The positive/negative, direct/indirect, and intended/unintended change or consequence of a planned project/program activity or intervention in the form of output, outcome or impact.

Source: [CLARISA glossary](#) – accessed on 2026-09-15

Science Program

The Reporting Tool's on-screen label for a Program (see Program) – the two terms refer to the same entity.

Source: PRMS (not on CLARISA) – accessed on 2026-09-15

Theory of change (ToC)

An explicit, testable model of how and why social change is expected to happen along an impact pathway in a development context. A basic research-for-development ToC identifies the context and key actors in a project, program or initiative and specifies the causal pathways and mechanisms by which the research aims to contribute to outcomes and impacts. This model can be used for: (i) designing and planning project logic including assumptions; (ii) monitoring and evaluation of processes and results including risk identification and mitigation; (iii) testing assumptions and identifying lessons learned, reflection for accountability and RBM, and using finding for evidence-based decision making for learning and accountability.
